**Limit of Liability**

Every effort has been made to make this manual as complete and as accurate as possible, but no warranty or fitness is implied. The information provided is on an "as is" basis. Ocean Optics shall have neither liability nor responsibility to any person or entity with respect to any loss or damages arising from the information contained in this document.
About This Manual

Warnings & Cautions

Caution: Read this manual thoroughly before using and operating this equipment.

Caution: Do not let contaminants get into the bench. Keep the protective cap on the slit aperture when not connected to an accessory, probe or fiber.

Caution: Only change the slit aperture in a clean environment where contaminants including dust cannot enter the bench during the procedure.

Caution: Substitution of a component or accessory different from that supplied may result in measurement error, equipment damage, increased radio-frequency emissions or decreased immunity from electrical disturbances.

Caution: Repairs should be undertaken only by personnel trained or authorized by Ocean Optics. The device does not contain any user serviceable parts.

Caution: Do not immerse the device in any fluid, place fluids on top of or attempt to clean with liquid detergents or cleaning agents. This may cause an electrical hazard. Use a clean linen cloth to wipe the equipment. Do not use if accidental wetting occurs.

Caution: Do not remove any covers. Doing so may increase the risk of electrical shock or compromise the integrity of the optical components.

Caution: Do not gas sterilize or autoclave this device.

Caution: Consult local codes and ordinances for proper disposal of equipment and other consumable goods.

Caution: The device and/or accessories may not operate correctly if used or stored outside the relevant temperature and humidity ranges described in the Technical Specifications.

Caution: Do not use if device is dropped and/or damaged. Have an authorized service representative check the device before using again.

Caution: Be sure to install any software BEFORE connecting the spectrometer to your PC or host system. The software installs the drivers required for spectrometer installation. If you do not install the software first, the system may not properly recognize the spectrometer.

Caution: The user of this spectrometer shall have the sole responsibility for any malfunction that results from improper use, faulty maintenance, improper repair, damage or alteration by anyone other than Ocean Optics or their authorized service personnel.

Certifications and Compliance

Warning
This is an FCC Class A product. In a domestic environment, this product may cause radio interference in which case the user may be required to take adequate measures.

FCC Compliance
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which the user will be required to correct the interference at his own expense.

Warning
The authority to operate this equipment is conditioned by the requirement that no modifications will be made to the equipment unless the changes or modifications are expressly approved by the manufacturer.

WEEE Compliance
The WEEE symbol on the product indicates that the product must not be disposed of with normal household waste. Instead, such marked waste equipment must be disposed of by arranging to return to a designated collection point for the recycling of waste electrical and electronic equipment. Separating and recycling this waste equipment at the time of disposal will help to conserve natural resources and ensure that the equipment is recycled in a manner that protects human health and the environment.
This device has been tested and complies with the following standards:

- EN 61326-1:2013
- EN 55011:2009 w/A1:2010

This device complies with RoHS materials standards.

Ocean Optics, the applied spectral knowledge company, has been certified for ISO 9001:2015 certification applicable to the design and manufacture of electro-optical equipment.

Warranty
For the most current warranty information, please visit oceanoptics.com.
Introduction

The Ocean Optics QE Pro Spectrometer is a spectrometer with broadband sensitivity, from UV to NIR, making it suitable for a wide range of applications. Its high sensitivity and thermoelectric cooler enable effective measurements at very low light levels.

Product Features

- Thermoelectrically Cooled
- Multiscan Data Buffering
- Interchangeable Slits
- Optional Internal Shutter

System Requirements

You can use the QE Pro's USB connectivity with any computer that meets the requirements for the spectroscopy application being used.

Alternately, the QE Pro has a serial port for connecting to PCs and PLCs. However, this connection method requires an external power supply to power the QE Pro, called the Breakout Box, and a serial cable.

EEPROM Utilization

Nonvolatile memory in each QE Pro contains wavelength calibration coefficients, linearity coefficients, and a serial number unique to each individual spectrometer. Ocean Optics’ spectroscopy application reads these values directly from the spectrometer, enabling the ability to “hot-swap” spectrometers between computers without entering the spectrometer coefficients manually on each computer.

About Ocean Optics Software

For the most up to date software, please refer to oceanoptics.com. OceanView is the general-purpose spectroscopy software for all Ocean Optics spectrometers. It is a completely modular, Java-based spectroscopy software platform that operates on Windows, Macintosh and Linux operating systems. The software can control any Ocean Optics spectrometer and device.

OceanView is a user-customizable, advanced acquisition and display program that provides a real-time interface to a variety of signal-processing functions. With OceanView, you can perform spectroscopic measurements (such as absorbance, reflectance, and emission), control all system parameters, collect and display data in real time, and perform reference monitoring and time acquisition experiments. Consult the OceanView manual for hardware requirements when using OceanView.
## Interface Options

The QE Pro has both USB and serial port connectors (with the use of an adapter), enabling you to connect the spectrometer to a desktop or notebook computer via a USB port or serial port.

<table>
<thead>
<tr>
<th>Computer Interface</th>
<th>Operating System Requirements</th>
<th>Part Needed</th>
<th>Description of Part</th>
</tr>
</thead>
<tbody>
<tr>
<td>USB Port</td>
<td>For the most current software, visit oceanoptics.com *</td>
<td>USB-CBL-1 (included)</td>
<td>Cable that connects from USB port on QE Pro to USB port on desktop or notebook PC</td>
</tr>
<tr>
<td>Serial Port</td>
<td>Any 32-bit or 64-bit Windows operating system</td>
<td>HR4-BREAKOUT (not included)</td>
<td>Adapter block that enables connection from serial port on QE Pro to serial port on desktop or notebook PC; comes with 5 VDC power supply (required when connecting to serial port)</td>
</tr>
</tbody>
</table>

* OceanView may run with previous operating systems but Ocean Optics does not actively support these installations.
Shipment Components

- QE Pro Spectrometer
- USB Cable
- +5VDC power supply
- Wavelength Calibration Data Sheet (please save for future reference)

Optional Breakout Box

Ocean Optics also offers the Breakout Box (HR4-BREAKOUT), a passive module that separates the signals from their 22-pin port to an array of standard connectors and headers, enabling easy access to a variety of features found in Ocean Optics’ QE Pro Spectrometer. In addition to the accessory connector, the breakout box features a circuit board based on a neutral breadboard pattern that allows custom circuitry to be prototyped.

NOTE

Be aware when using the Breakout Box that the signals for hardware flow control (handshaking) are not connected in the QE Pro.
Installing the QE Pro

You must install the spectroscopy application prior to connecting the QE Pro Spectrometer to the computer. The Ocean Optics spectroscopy application installs the drivers required for the QE Pro spectrometer installation. If you do not install the application first, the system will not properly recognize the QE Pro.

If you have already connected the QE Pro to the computer prior to installing the spectroscopy software, consult the Troubleshooting section for information on correcting a corrupt QE Pro installation.

QE Pro Installation

This section contains instructions for connecting the QE Pro via both USB and serial modes.

USB Mode

QE Pro Spectrometer Device Driver Installation

If the computer is connected to the internet, the device driver installation will occur automatically. If the computer is offline, you will need to open the device manager and search for the drivers.

Serial Port Mode

1. Plug the 5 VDC external power supply into an outlet and connect it to the QE Pro.
2. Connect the serial cable adapter block to the appropriate pins of the QE Pro’s 30-Pin Accessory Connector.

Connect one end of the 9-pin serial cable to the adapter block on the QE Pro, and then connect the other end to a serial port on the PC. Note the number of the serial port (COM Port) to which you connected the QE Pro (some PCs may not have numbered ports; handheld PCs typically have only one serial port).

LED Operation

The QE Pro features two status LEDs:

<table>
<thead>
<tr>
<th>LED Position</th>
<th>Meaning</th>
</tr>
</thead>
</table>
| **Top LED**  | Monitors Spectrometer status:  
  - Off – spectrometer does not have power  
  - Flashing orange – spectrometer is booting  
  - Steady green – spectrometer is ready |
| **Bottom LED** | Monitors Thermoelectric Cooling (TEC) status:  
  - Off – TEC system is off  
  - Orange – TEC has not yet stabilized at its given setpoint  
  - Green – TEC is stable (has been within 1 °C of the setpoint for at least 15 seconds) |
Configuring the QE Pro

The QE Pro can be used with OceanView software when connected to the USB port. If you have followed the previous steps and started your spectroscopy application, the spectrometer is already acquiring data. Even with no light in the spectrometer, there should be a dynamic trace displayed in the bottom of the graph. If you allow light into the spectrometer, the graph trace should rise with increasing light intensity. This means the software and hardware are correctly installed.

Configuring QE Pro in OceanView

If you have followed the previous steps and started OceanView, your spectrometer appears in the Schematic and Graph Views:

OceanView QE Pro Acquisition Controls

In OceanView, the Acquisition Parameter Controls allow you to set the desired parameters for QE Pro.

TE Cooler

To control the TE Cooler:

1. Right-click on the QE Pro in the Schematic View.
2. Select New Acquisition | Thermo-Electric Cooling.

Ocean QE PRO
Buffering

To control buffering,

1. Right-click on the QE Pro in the Schematic View.
2. Select **New Acquisition | Data Buffer**.

Data buffering can also be set using the Acquisition Parameter Controls.

To add data buffering controls to the Acquisition Parameter Controls,

1. Click on the **Add/Remove Controls** tab.
2. Select Data Buffer. The **Data Buffer** controls appear on the Main Controls tab.
3. Select the data buffering capacity (the total number of scans the device can store at once).
4. Click **Clear Buffer** to set the buffer to zero and start over.

Optional Shutter

To enable the optional shutter,

1. In the Acquisition Group window, click on the **Add/Remove Controls** tab.
2. Select **GPIO**. The GPIO controls appear on the Main Controls tab.
3. Check the **Out** box for Index 4. This makes the GPIO an output.
4. Check the **Value** box for Index 4 to close the shutter. You can now take your dark measurement.
5. Uncheck the Value box to open the shutter.
**NOTE**

Make sure the ALT checkbox for the GPIO (Index 4) is not selected, which would prevent the shutter from triggering. The activation time of the internal shutter is 11 ms.

---

**External Triggering Options**

---

**Changing the Slit**

QE Pro has an interchangeable slit feature that allows you to move rapidly between different measurement types without changing your spectrometer.

For instructions on how to change the slit on your spectrometer, visit [oceanoptics.com](https://www.oceanoptics.com).

Ocean Optics recommends that a calibration always be performed after changing the slit on a spectrometer as it will optimize the performance of the device.

---

**Calibrating the Wavelength of the QE Pro**

Each spectrometer is calibrated before it leaves Ocean Optics, however the wavelength for all spectrometers will drift slightly as a function of time and environmental conditions.

For instructions on how to calibrate the QE Pro, visit [oceanoptics.com](https://www.oceanoptics.com).
Troubleshooting

QE Pro Connected to Computer Prior to Application Installation

Windows Operating Systems

If you connected your Ocean Optics QE Pro device to the computer prior to installing your spectroscopy application (OceanView) on a Windows platform, you may encounter installation issues that you must correct before your Ocean Optics device will operate properly.

Follow the applicable steps below to remove the incorrectly installed device, device driver, and installation files.

**Remove the Unknown Device from Windows Device Manager**

1. Open Windows Device Manager. Consult the Windows operating instructions for your computer for directions, if needed.
2. Locate the Other Devices option and expand the Other Devices selection by clicking on the “+” sign to the immediate left.
3. Locate the Unknown Device (marked with a large question mark). Right-click on the Unknown Device listing and select the Uninstall or Remove option.
4. Click the OK button to continue. A warning box appears confirming the removal of the Unknown Device. Click the OK button to confirm the device removal.
5. Disconnect the QE Pro from your computer.
6. Re-plug the spectrometer into your computer. The system should now be able to locate and install the correct drivers for the USB device.

**NOTE**

Improperly installed USB devices can also appear under the Universal Serial Bus Controller option. Be sure to check this location if you cannot locate the unknown device.

If these procedures do not correct your device driver problem, you must obtain the Correcting Device Driver Issues document from the Ocean Optics website: www.oceanoptics.com.
Apple Mac OSX Operating Systems

Since there are no device files for the QE Pro Spectrometer in a Mac operating system, you should not encounter any problems if you installed the spectrometer before the operating software.

Linux Operating Systems

For Linux operating systems, all you need to do is install the software, then unplug and re-plug in the spectrometer. Technically, the driver files for Linux simply give nonprivileged users permission to use newly connected hardware. There isn’t any long-term harm to plugging in the device before installing the software.

FPGA Firmware Upgrade

The FPGA firmware in the QE Pro should be upgraded using the USB bus. Upgrading the FPGA firmware in the QE Pro via the RS-232 serial bus produces unpredictable results.

TEC Readback Accuracy at Temperature Extremes

The TEC temperature is read back by a thermistor embedded in the detector. As with most thermistors, the relationship between resistance and temperature is non-linear. However, the QE Pro uses a piecewise linear interpolation to convert from resistance to temperature. This linearization is targeted at the range from -20 °C to 40 °C. Accuracy will deteriorate beyond the edges of this range.

TEC Readback Temperature Not Exactly at Setpoint

The settled TEC readback temperature is slightly different from the TEC setpoint temperature, typically by ~0.2 °C. However, on other Ocean Optics products (and some competitive products), the TEC temperature appears to settle exactly at the TEC setpoint (generally when the TEC control loop uses a common ADC for both control and readback). The QE Pro uses an ADC that is independent of the control loop, resulting in a more reliable value. Although TEC accuracy is typically not very important to users, TEC stability (outstanding on the QE Pro) is critical.

Baseline Drifts Downward

The baseline has been measured to drift downward at a rate of 6.5 counts over 45 minutes, even after the TEC is considered to be stable. This issue can be mitigated by electric dark correction.

The Timing of Acquiring Spectra

With other Ocean Optics spectrometers, a request to get the spectrum retrieves the current spectrum in the process of completing. With the QE Pro, the most recently completed spectrum is retrieved.

HR4000 Breakout Board DC Power Input

The HR4000 breakout board contains a DC power input. This is typically used on other Ocean Optics devices to power the device when it is being controlled via RS-232 instead of USB. However, the QE Pro does not support the GPIO power inputs; instead, use the DC power jack input on the QE Pro itself. Plugging in a DC power input to the HR4000 breakout board may damage the internal circuitry on the QE Pro or the power supply itself.

HR4000 Breakout Board RTS and CTS Signals

The HR4000 breakout board also does not connect the RTS and CTS signals from the QE Pro to its RS-232 connector.

### System Compatibility

You can use the QE Pro’s USB connectivity with any computer that meets the requirements for the spectroscopy application being used.

Alternately, the QE Pro has a serial port for connecting to PCs, PLCs, and other devices with a Windows 32-bit operating system that supports the RS-232 communication protocol. However, this connection method requires an external power supply to power the QE Pro, the HR4000 Breakout Box, and a serial cable.
## 30-Pin Accessory Connector Pinout
